SOME QUESTIONS ABOUT A DARMAH SS

Where does one tap into the engine to monitor full oil pressure? I've looked into it and come up with the front cylinder's left side rocker shaft housing since it contains a ball bearing and appears to have an oil pressure galley way drilled down into the barrel. I'd sure like some input before I commit my idea to drill and tap.

Newsletter No. 29 shows a 900 on page 6 that has the front calipers reversed and mounted behind the front axle. I've always thought they looked better that way. Any reasons why I couldn't move them there too?

Does anyone know how involved and expensive it would be to add a kickstarter to my '80 Darmah SS?

Thanks to anyone who can help.
